

CASE STUDY

SMART ENTERPRISE SYSTEM

#logistic_solutions #profitability_calculations #sales_optimization

SMART ENTERPRISE SYSTEM

Multi-Functional Service Tracking System.
Profitability Estimation With Automated Testing.
Vehicle Tracking System.

Business Needs

The client required a system that would resolve the problems with the sales process, optimization of the logistics, and improving service tracking. Having a considerable number of vehicles and contracts, the client did not have a consistent and universal system for tracking the processes.

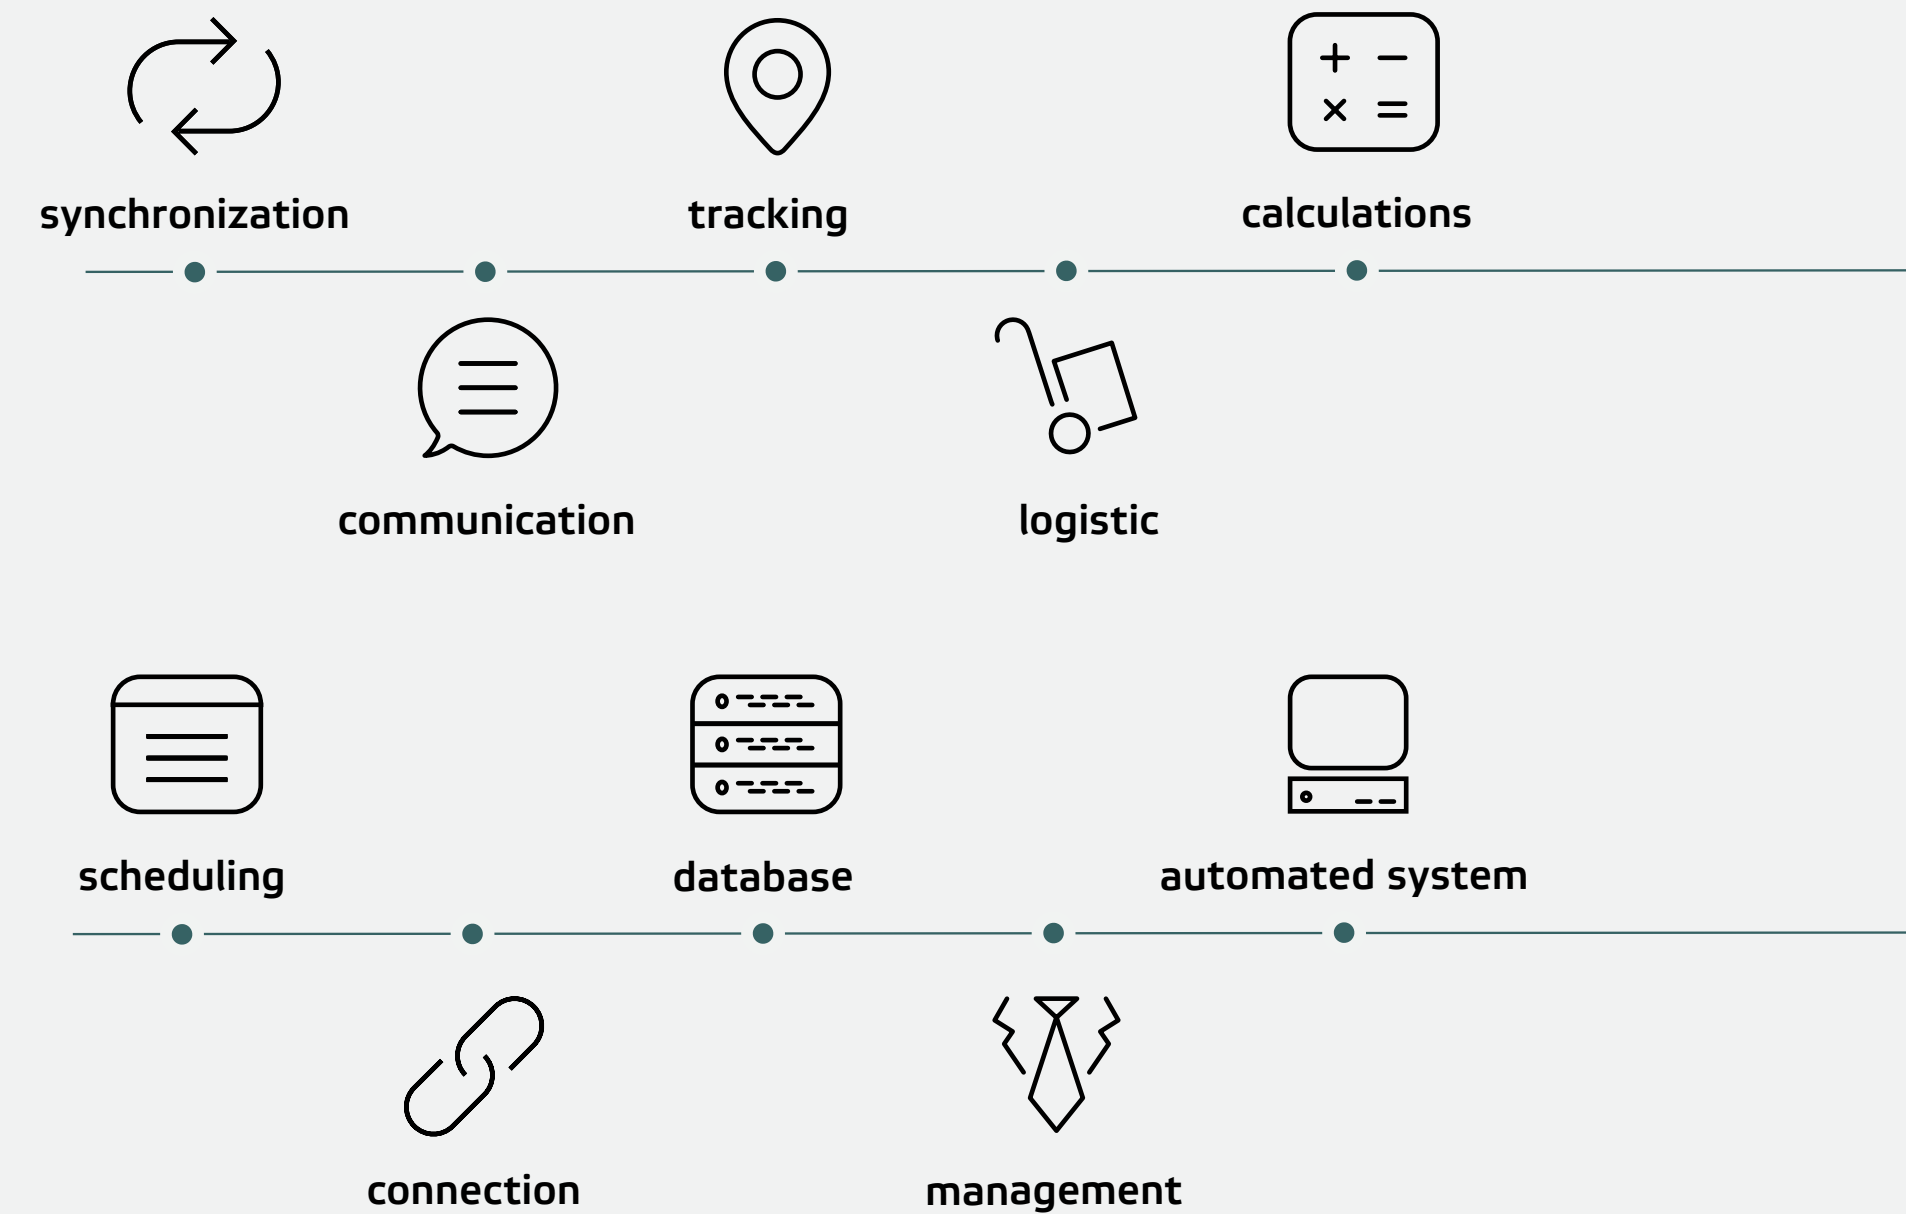

Challenge

- Accurate inventory reporting
- Profitability calculation
- Synchronization with external sources
- Scheduling
- Expense counting
- Customer Relationship Management
- Labor management
- Easy access to customer journey and control

Solutions

- ✓ Logistic tasks resolution
- ✓ Customer Relationship Management and direct communication
- ✓ Tracking of operation-related damage requests

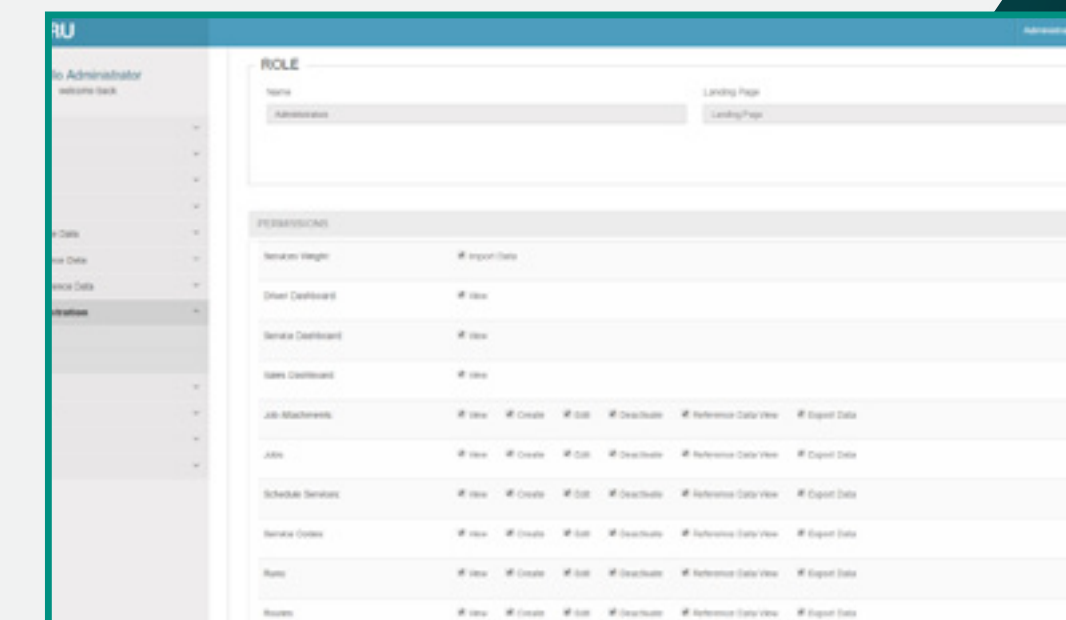

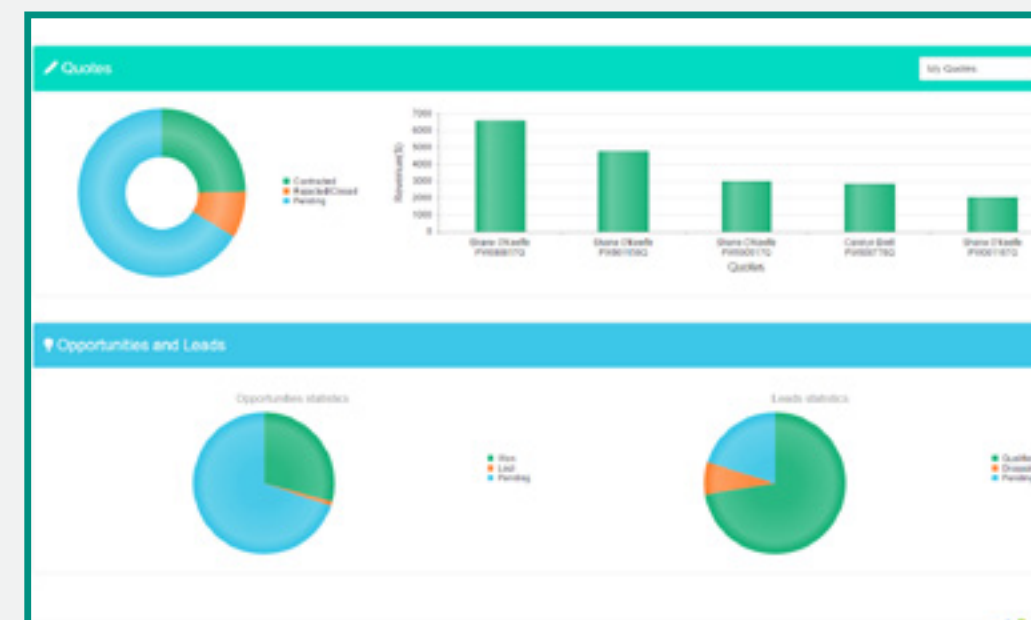

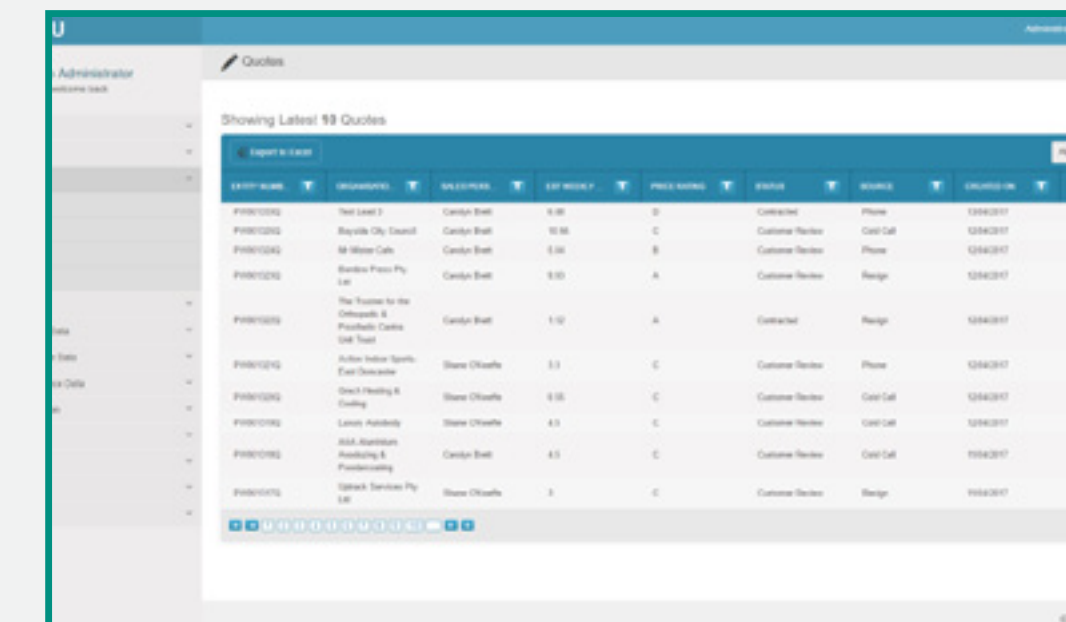

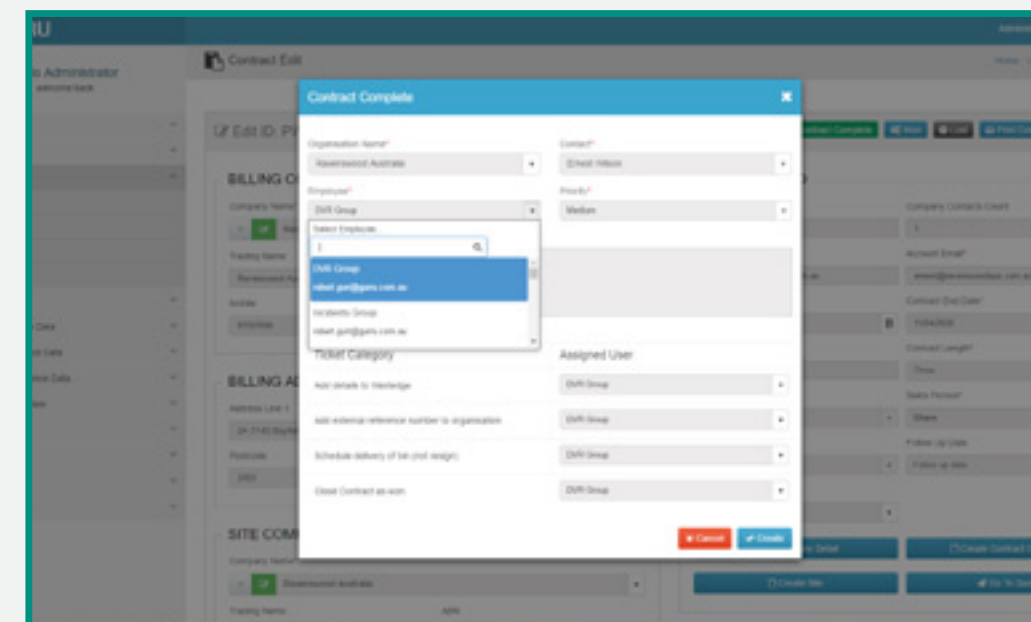

SOFTWARE

Results

- System rates the contracts and chooses the profitable ones
- Automatically covers the logistics-related damages/ fines
- Schedules the logistic tasks
- Improved sales process
- Optimized cloud exploitation

Technologies:
.NET, Azure, SQL, Angular JS, Telerik

Industry: **Logistics**
